

WHAT IS CLAIMED IS:

1. A system for providing medical moving picture data of a unborn child or a baby connected with an affiliated medical institute and an affiliated studio on an internet, said system comprising:

a moving picture database for storing said moving picture data classified according to each member's baby; and

a multimedia server for receiving said moving picture data from said medical institute, storing said moving picture data in said moving picture database, said moving picture data classified according to said each member's baby and transmitting said moving picture data to a member's service terminal on request of said member.

2. The system of claim 1, said system further comprising:

a photo database for storing photo data classified according to said each member's baby; and

a photo server for receiving said photo data from an information providing apparatus of said studio, storing said photo data in said photo database according to said each member's baby and transmitting said photo data to a member's service terminal on the request of said user.

3. The system of claim 1, wherein said moving picture data include a ultrasonic moving pictures of an unborn child, sound of heart beat of said unborn child, moving pictures of delivery of said baby, footprint and at least one moving picture of

said baby after delivery.

4. The system of claim 2, wherein said photo data include an ultrasonic photo of an unborn child, a photo of said baby during delivery, footprint and at least one photo of said baby after delivery.

5. A method of providing medical moving picture data via a relay apparatus for providing medical information on a baby affiliated with a medical institute and a studio on an internet, said method comprising steps of:

(a) storing a moving picture data classified according to each member's baby after said relay apparatus receives said moving picture data from said medical institute; and

(b) transmitting said moving picture data to a member's service terminal on request of said member.

6. The method of claim 5, said method further comprising step of:

(c) storing photo data in said member's database classified according to each said member's baby after said relay apparatus receives said photo data from said affiliated studio; and

(d) transmitting photo data to said member's service terminal by said relay apparatus on request of said member.
